

Explore the world of water bugs

Waterways are home to many creatures, including water bugs. The types of water bugs and the number of them living in the water can help us understand how healthy the water is.

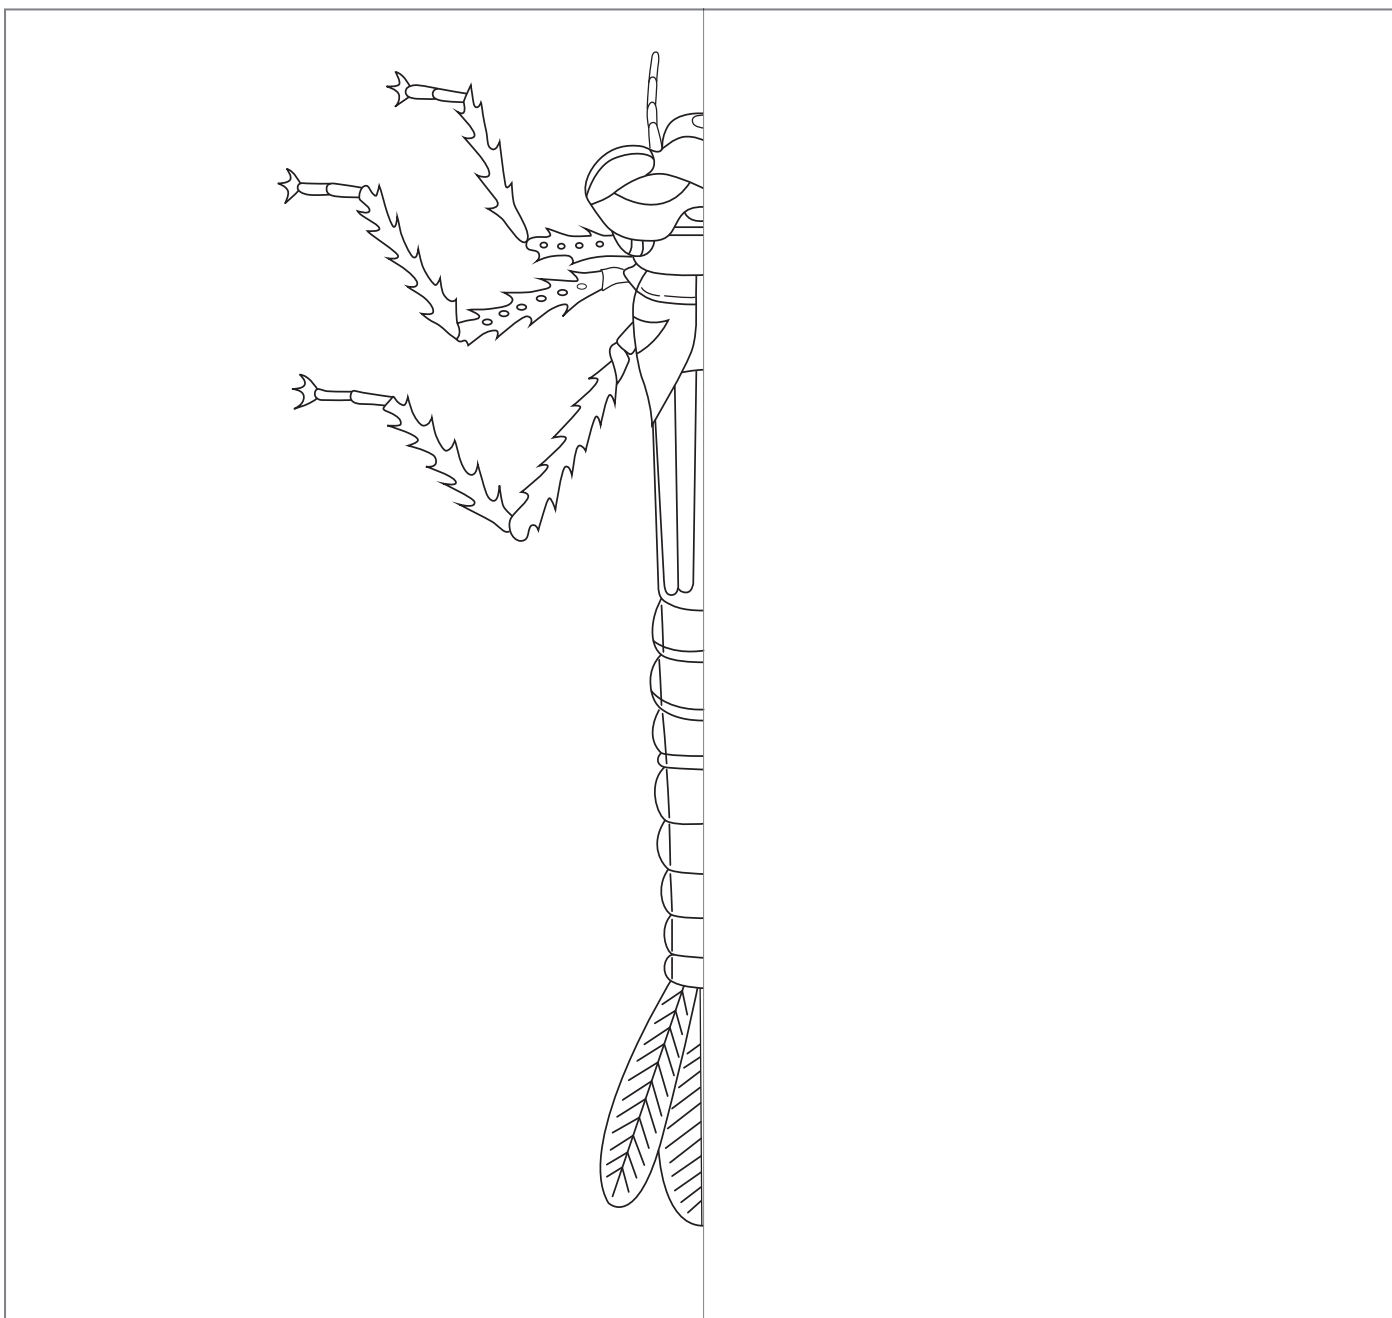

Damselfly Nymph

Use the line of symmetry to help you draw the mirror image of your bug.

 Damselfly Nymphs are found on plants, amongst rocks and leaves and burrowed into freshwater stream beds.

 They eat small insects, tadpoles and small fish.

 There are over 100 different types around Sydney.

How sensitive is your bug to pollution in the water?
