

Explore the world of water bugs

Waterways are home to many creatures, including water bugs. The types of water bugs and the number of them living in the water can help us understand how healthy the water is.

Water Scorpion

Use the line of symmetry to help you draw the mirror image of your bug.

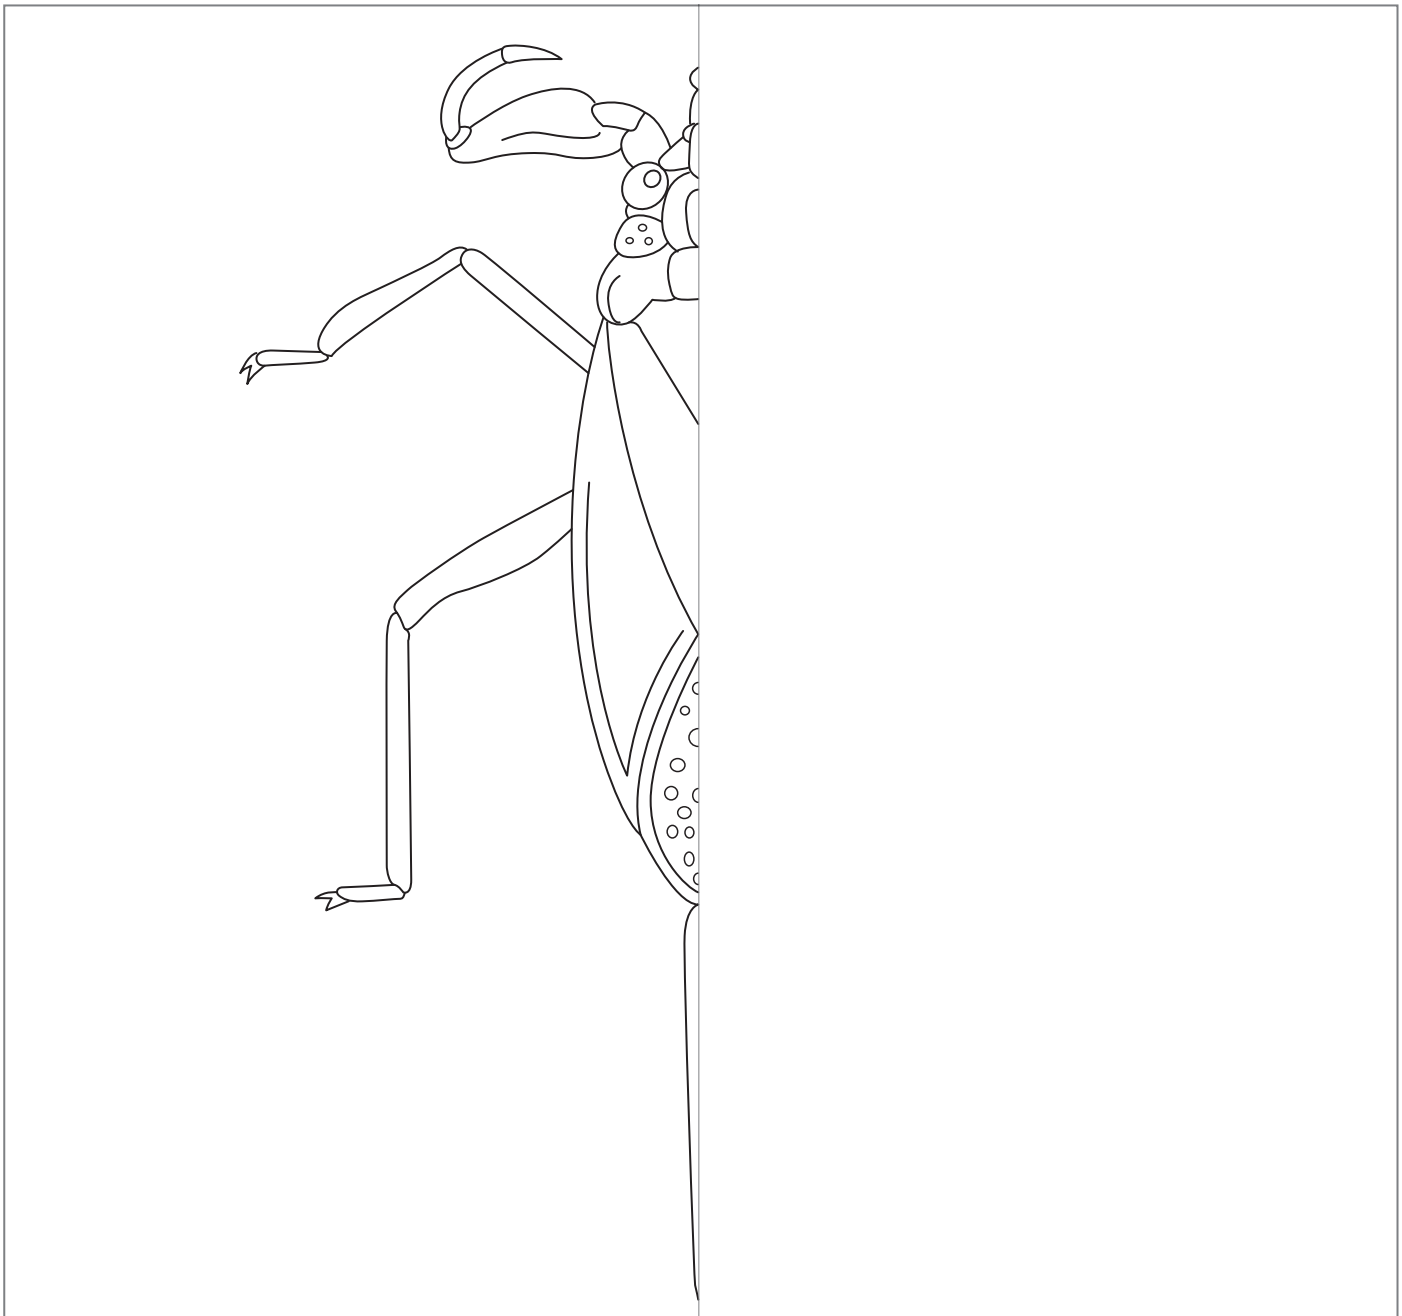

Water Scorpions live among plants or on the water surface of slow-moving freshwater.

They eat tadpoles and small fish.

Water Scorpions breath through their tail and have excellent eyesight.

How sensitive is your bug to pollution in the water?
