

Explore the world of water bugs

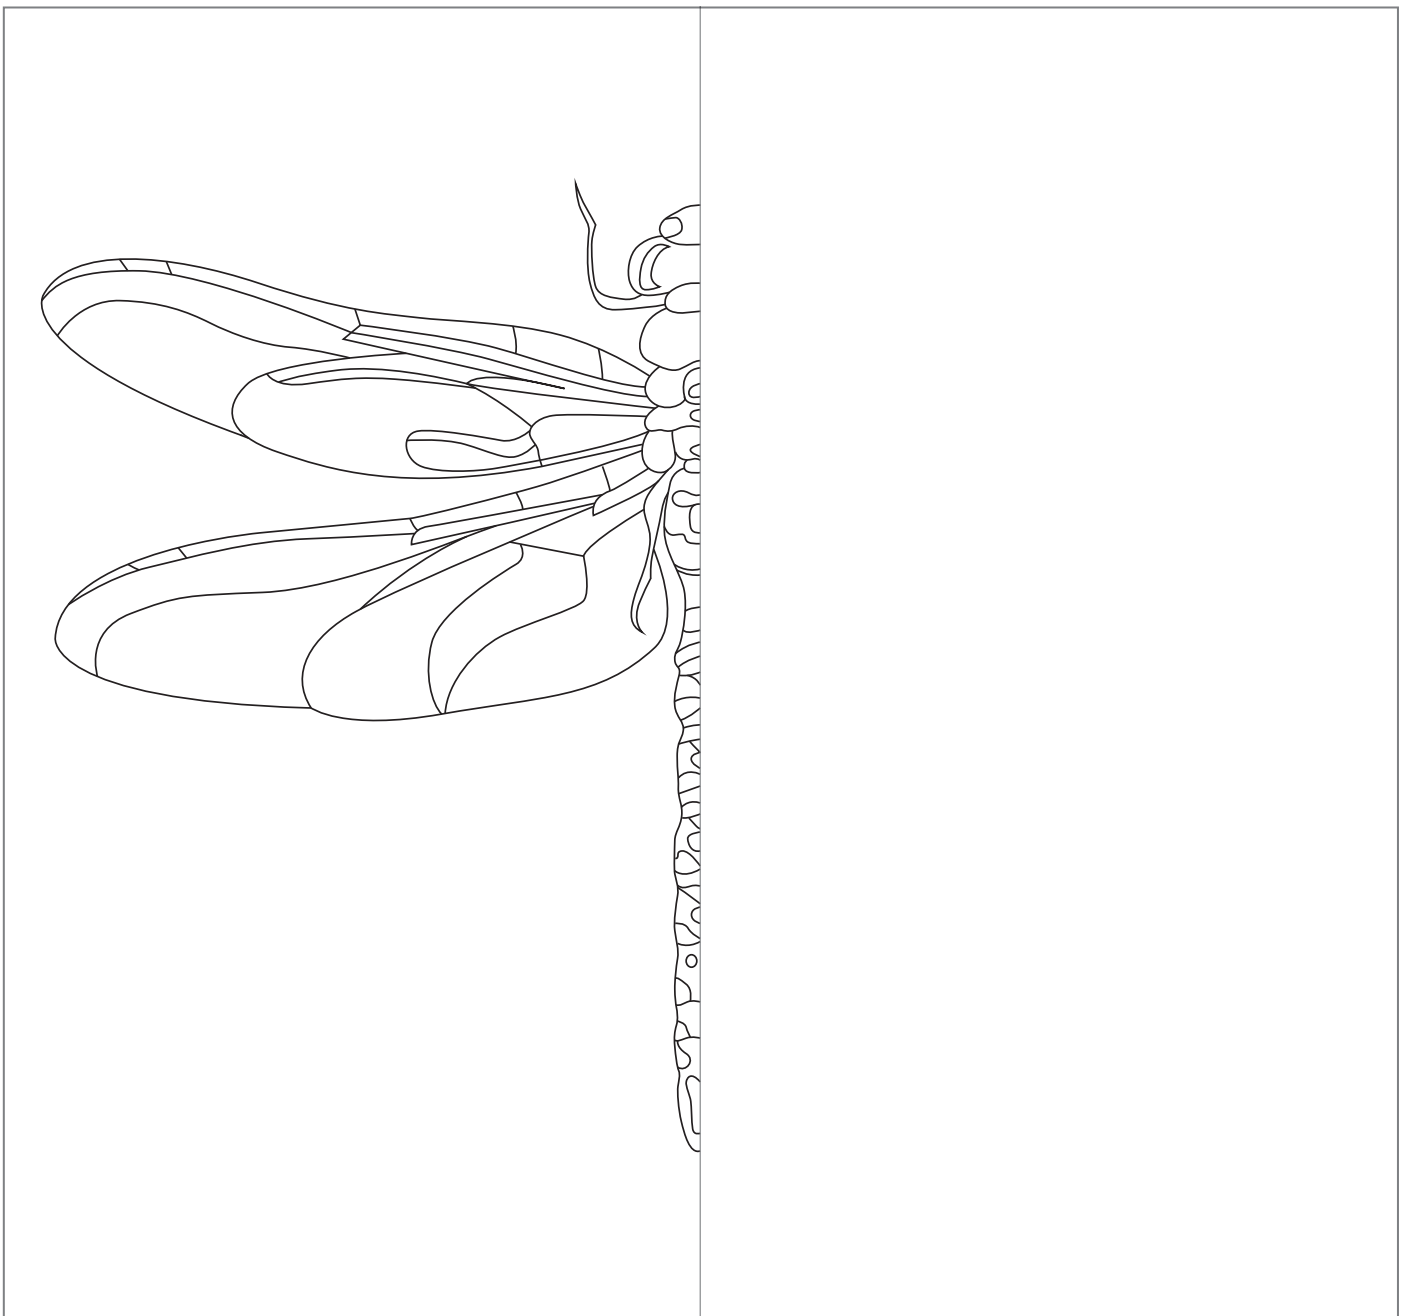

Waterways are home to many creatures, including water bugs. The types of water bugs and the number of them living in the water can help us understand how healthy the water is.

Dragonfly

Use the line of symmetry to help you draw the mirror image of your bug.

- Many Dragonfly Nymphs (young) live in freshwater rivers and streams on plants, amongst rocks and burrowed into the stream bed.
- They eat flying insects.
- Dragonfly Nymphs are older than the dinosaurs.

How sensitive is your bug to pollution in the water?

Very tolerant			Tolerant		Sensitive		Very sensitive		
1	2	3	4	5	6	7	8	9	10
